

sys\_\_\_acl\_aclcheck\_file

sys\_\_\_acl\_aclcheck\_link

kern\_\_\_acl\_aclcheck\_path

```
graph LR; A[sys___acl_aclcheck_file] --> C[kern___acl_aclcheck_path]; B[sys___acl_aclcheck_link] --> C;
```

The diagram illustrates the relationship between system call wrappers and the kernel implementation. Two boxes on the left, labeled 'sys\_\_\_acl\_aclcheck\_file' and 'sys\_\_\_acl\_aclcheck\_link', have blue arrows pointing to a single box on the right labeled 'kern\_\_\_acl\_aclcheck\_path'. The 'kern\_\_\_acl\_aclcheck\_path' box is shaded gray, indicating it is the kernel-level function being called by the system calls.
