

bcma_bhndb_resume_child

siba_bhndb_resume_child

bhnd_generic_br_resume
_child

```
graph LR; bcma[bcma_bhndb_resume_child] --> generic[bhnd_generic_br_resume_child]; siba[siba_bhndb_resume_child] --> generic;
```

The diagram illustrates inheritance relationships between three resume child structures. On the left, two white boxes represent specific implementations: 'bcma_bhndb_resume_child' (top) and 'siba_bhndb_resume_child' (bottom). On the right, a gray box represents the generic implementation: 'bhnd_generic_br_resume_child'. Two blue arrows point from the left boxes to the right box, indicating that both specific implementations inherit from the generic one.
